

Certificate of Analysis SALSA® MLPA® Probemix P265 PROC

| Probemix P265 PROC | |
|--|---|
| B4-0422 | |
| 25, 50, or 100 reactions. | |
| Dry ice or cooling elements. | |
| Store upon arrival between -25°C and -15°C. | |
| Expiration date: April 2027, when stored at recommended condition should not be frozen/thawed more than 25 times. | ns. This product |
| This product has been developed to determine the DNA copy number of the human <i>PROC</i> gene, as described in table 1 and 2 of the product description. This probemix is designed for use only in combination with SALSA MLPA reagent kits and Coffalyser.Net analysis software as described in the MLPA General Protocol. | |
| Sufficient distance between peaks, absence of extra or shoulder peaks, and completeness of hybridisation of each individual probe, as tested on Applied Biosystems and Beckman/SCIEX GeXP sequencers. Standard deviation of each individual probe ≤0.10, when tested on 23 different DNA samples of healthy individuals, extracted by various methods. Each individual probe meets reaction-specific criteria when tested on a single DNA sample under various experimental conditions. No-DNA controls result in only five major peaks shorter than 121 nucleotides (nt): four Q-fragments at 64, 70, 76 and 82 nt, and one peak in the range of 0-40 nt corresponding to the unused portion of the fluorescent PCR primer. Non-specific peaks longer than 121 nt AND with a height <25% of the median of the four Q-fragments | Test result PASS |
| | tore upon arrival between -25°C and -15°C. Expiration date: April 2027, when stored at recommended condition hould not be frozen/thawed more than 25 times. This product has been developed to determine the DNA copy number (ROC) gene, as described in table 1 and 2 of the product description. The designed for use only in combination with SALSA MLPA reagent kits a coffalyser. Net analysis software as described in the MLPA General Product description at the MLPA General Product description of each individual probe, as tested on Applied Biosystems and Beckman/SCIEX GeXP sequencers. Standard deviation of each individual probe ≤0.10, when tested on 23 different DNA samples of healthy individuals, extracted by various methods. Each individual probe meets reaction-specific criteria when tested on a single DNA sample under various experimental conditions. No-DNA controls result in only five major peaks shorter than 121 nucleotides (nt): four Q-fragments at 64, 70, 76 and 82 nt, and one peak in the range of 0-40 nt corresponding to the unused portion |

None of the ingredients are derived from humans, animals, or pathogenic bacteria. Based on the concentrations present, none of the ingredients are hazardous as defined by the Hazard Communication Standard. A Safety Data Sheet (SDS) is not required for these products: none of the preparations contain dangerous substances (as per Regulation (EC) No 1272/2008 [EU-GHS/CLP] and amendments) at concentrations requiring distribution of an SDS (as per Regulation (EC) No 1272/2008 [EU-GHS/CLP] and 1907/2006 [REACH] and amendments). If spills occur, clean with water and follow appropriate site procedures.

Certificate of Analysis SALSA MLPA Probemix P265-B4 PROC sample picture

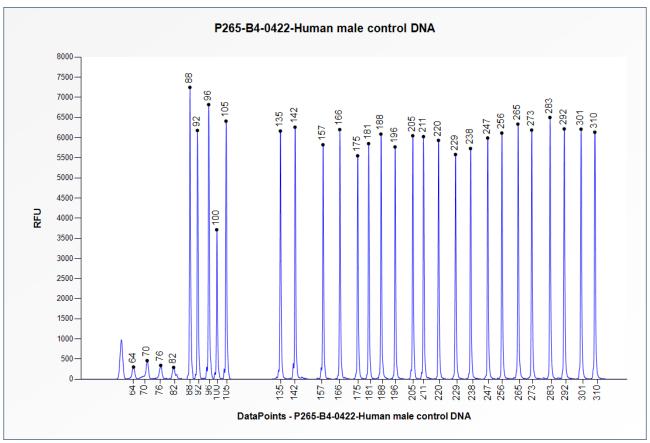

Figure 1. Capillary electrophoresis pattern from a sample of approximately 50 ng human male control DNA analysed with SALSA MLPA Probemix P265 PROC (B4-0422).

This lot was certified by MRC Holland on 28 September 2022.

This certificate is a declaration of analysis at the time of the manufacturing process. All assays were run in compliance with manufacturer's instructions for use.

Implemented changes in the COA

Version 01 - 28 September 2022 (6)

- Not applicable, new document.
